Software Engineer: AI agents, full-stack systems, native apps

EXPERIENCE

Software Engineer Intern | Keystone Tile, Houston, TX Jun 2026 – Present

- Sole engineer at a 5-location distributor. Built Keystone Hub, a native SwiftUI app for iPhone, iPad and Mac (~34K lines of Swift) giving staff offline search over a 4,362-product catalog.
- Engineered offline-first catalog sync with atomic, SHA-256-verified SQLite generations, import quality gates and one-click rollback; built FTS5 search with weighted BM25 ranking and exact-SKU-first ordering.
- Shipped on-device barcode, OCR and stone photo matching with Apple Vision under a strict confidence policy, covered by 105 XCTest and 62 in-app self-tests in GitHub Actions CI.
- Built FieldOps, a field-sales platform (Django REST API, Next.js, SwiftUI, Postgres job queue, Terraform for AWS), and rebuilt the company website in Next.js 16 (1,764 products, 40 pages, 11 APIs) with Zod, rate limits and CSP.
- Automated data sheets for 1,583 SKUs in Python (SSIM 0.9995 visual match) and QR labels for 826 products with 0 scan failures.

Front-End Developer Intern | Voyager Group, Bishkek, Kyrgyzstan Mar 2022 – Jan 2023

- Developed responsive booking interfaces with React and Bootstrap and integrated REST APIs across search and reservation workflows; shipped in two-week Agile sprints with Git code review.

Software Developer Intern | MitApp, Bishkek, Kyrgyzstan Aug 2022 – Nov 2022

- Delivered React/Redux interfaces from Figma designs, built a reusable component library and wrote unit tests.

PROJECTS

InvAI | TypeScript, Node.js, PostgreSQL, BullMQ, React, Python, Claude API Sep 2026 – Present

- Founded and led engineering of a multi-tenant SaaS for print shops by designing a 20-role Claude Code agent team with file-ownership hooks, independent review and integration gates (8 repos, ~1,800 tests).
- Architected a contract-first typed API (258 procedures), Postgres RLS multi-tenancy (88 policies), a transactional outbox with crash-safe exactly-once side effects, and an AI gateway with spend breakers and a 133-case eval harness.

IntentLock (Rice Hackathon) | TypeScript, Cloudflare Workers, D1, WebAuthn, Web Crypto Sep 2026

- Built solo in 2 days a verified-human authorization gateway for AI agents: a default-deny policy engine (11 checks) kept outside the model and WebAuthn passkey approvals bound to SHA-256 digests of the exact action.
- Enforced exactly-once execution with 3 database uniqueness constraints, a P-256-signed hash-chained audit log and an epoch-based kill switch; validated against 10 simulated attacks incl. replay and prompt injection.

Wardrobe AI | Next.js 16, TypeScript, Supabase (PostgreSQL), OpenAI API, Playwright Jul 2026

- Built 15 OpenAI workflows with Zod structured outputs, validating every AI outfit against items the user owns; a 5-intent router sends only 3 intents to a model, so lookups cost zero tokens.
- Enforced row-level security on every table (37 policies) and TOTP MFA at the database layer; 787 automated tests (unit, integration, E2E) in GitHub Actions.

NeuroTech (Rice Datathon) | Python, PyTorch Jan 2026

- Built an EEGNet-style CNN on 4-class motor EEG (86 subjects), reaching ~51.5% accuracy on 17 unseen subjects (25% chance).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, Swift, SQL

AI / Agents: Claude API, OpenAI API, structured outputs, LLM evals, agent guardrails, PyTorch

Backend & Data: Node.js, Django, REST APIs, PostgreSQL, SQLite (FTS5), Redis / BullMQ, Supabase

Frontend & Mobile: React, Next.js, Tailwind CSS, SwiftUI, offline-first apps

Cloud & DevOps: AWS, Cloudflare Workers, Docker, Terraform, GitHub Actions, Linux, Git

Security: WebAuthn / passkeys, OAuth / MFA, row-level security, CSP, cryptographic signing

EDUCATION

North American University, Houston, TX Expected Dec 2026

B.S. Computer Science (Software Development) | GPA: 3.58/4.00

AWARDS & LEADERSHIP

Honors: ICPC South Central Regional (2025): 2nd place at UH site, Honorable Mention, team captain | National Math Olympiad Gold (2020, 2021)

Certifications: AWS Certified Developer – Associate (2024) | Hugging Face AI Agents Fundamentals (2026) | Anthropic Claude Code 101 (2026)

Leadership: Co-founder & President, KurultAi R&D Club (Aug 2024 – Present), 30+ members, workshops & hackathons | Treasurer & Mentor, ACM at NAU | TA, ZERO ONE
